

# Syllogism of Release

If I can dream,  
then my body is just a place I stay.  
If my cells can dream,  
then they are visitors, too.

If both I and my cells are a temporary commune,  
then perhaps we can communicate.

If I can make requests of my body's genes,  
then I am not a victim of heredity.  
If I can participate in the inheritance of evolutionary traits,  
then I will think of what I want to be.

If I can watch what I think,  
then I am something other than my thoughts.  
If I am not my thoughts,  
then I exist apart from my perceptions.

If I am not my perceptions,  
then I do not have to respond to them.  
If I can rise above my problems,  
then I shall be released.

So, therefore,  
if I can dream, then I shall be released.
